

LUXALON®

Linear

Hunter Douglas Luxalon® Linear Ceilings providing interesting possibilities for directional room design. Employ smooth, clean lines or mix sizes, heights and over 40 available colours to create staggered, multi-layered ceiling designs.

HunterDouglas

CEILING

Linear

In line with style

DESIGN FLEXIBILITY

Luxalon® Linear Ceilings provide interesting possibilities for directional room design. Our ceiling systems highlight versatility, allowing a variety of visual effects, including radial and diagonal patterns, finishes and curves. Choose from over 40 available colours and mix and match different sizes and heights to create the perfect look for your project.

DURABILITY

Luxalon® Linear Ceilings are manufactured from durable roll formed aluminium coil, 0.35 mm, 0.5 mm or 0.6 mm, finished with a polyester paint to provide a long, low maintenance life. The coating is stove enamelled in a continuous coil coating process ensuring uniform coating thickness and absolute adhesion. For exterior applications aluminium panels with Luxacote® finish are available.

EASY PLENUM ACCESS

Most panels can be easily demounted by hand allowing easy and full access to services and installation in the plenum.

ACOUSTIC PERFORMANCE

In order to improve the acoustic comfort in a room, the ceiling panels can be perforated with 1, 1.5 or 2 mm round holes. As a standard feature, perforated panels are supplied with a sound absorbing non-woven tissue glued into the panel for enhanced acoustical performance.

No matter your style, our linear ceilings have the looks you love. Whatever your project's needs, our linear ceilings give you the freedom to think inside or outside the box. Our ceiling systems highlight versatility, allowing a variety of visual effects, including radial and diagonal patterns and curves.

ENVIRONMENT

In close cooperation with other members of TAIM eV, Hunter Douglas has established Environmental Product Declarations (EPDs) for both steel and aluminium ceilings. Certificates are available on request.

According to French Regulations DEVL 1101903D of 23 March, 2011 and Amendment DEVL 1104875A of 19 April, 2011, on declaration of VOC emissions to indoor air, Hunter Douglas plain and perforated ceilings with non-woven acoustic fabric, have a VOC classification A+ (lowest class of emissions to indoor air).

Innovative Products Make Innovative Projects

Multi-panel

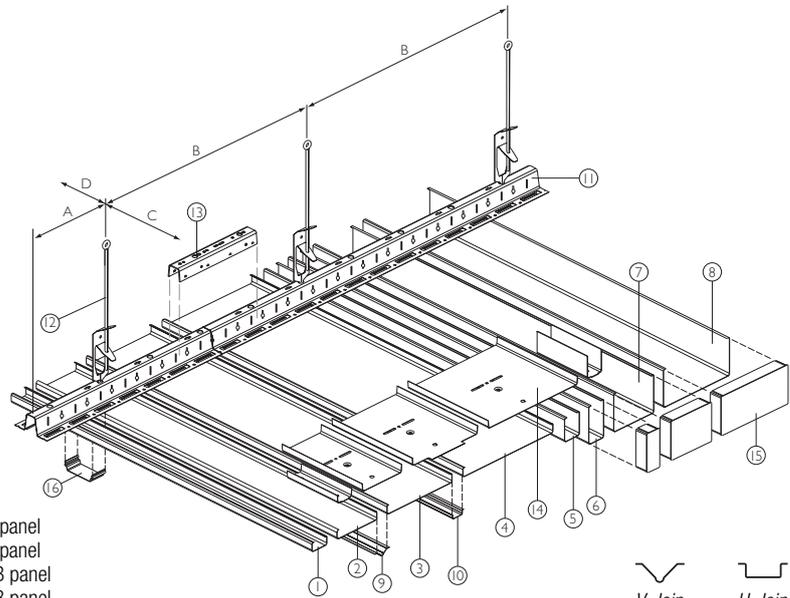

PANELS

The Multi-Panel Ceiling System consists of box-shaped panels in 8 varying widths and heights. With this system there is the possibility to create a ceiling design with different widths and heights in one ceiling. The 20 mm joint can be filled with a V-shaped or U-shaped joint profile.

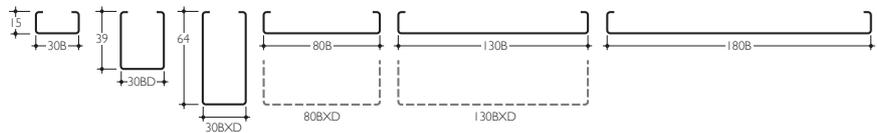

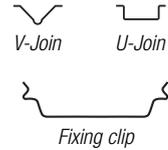

SUSPENSION

The panel carrier (11) is provided with prongs to accommodate the panels in a module of 50 mm or a multiple of this module. Carriers are joined by using the carrier splice (13).

Flexible carriers are available in order to create curved ceilings.

- 1 = 30B panel
- 2 = 80B panel
- 3 = 130B panel
- 4 = 180B panel
- 5 = 30BD panel
- 6 = 30BXD panel
- 7 = 80BXD panel
- 8 = 130BXD panel
- 9 = Recessed V-join profile
- 10 = Recessed U-join profile
- 11 = Multi-Panel Carrier
- 12 = Hanger
- 13 = Carrier Splice
- 14 = Panel Splice
- 15 = End Cap
- 16 = Fixing clip

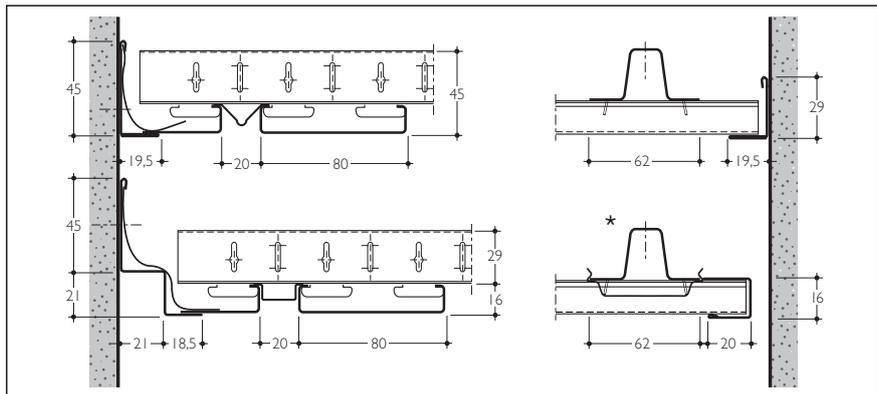

CONSTRUCTION DETAILS

The panels are clipped to a universal multi-panel carrier, creating the opportunity to use panels with different widths and heights in one ceiling.

The standard range of edge profiles can be used for perimeters.

* With open joints the fixing clip (16) should be used in combination with an adaptor panel.

MAXIMUM SPANS

* Minus 200 mm in case of acoustic pads.

CCA Acoustic+ 30BD and 30BXD

COMPLETE COVERAGE

Traditional ceilings systems like baffle and ceiling islands offer an acoustic solution, however complete ceiling coverage is not possible. The excellent thermal exchange and acoustic performance of Luxalon® CCA Acoustic+ 30BD and 30BXD enables 100% acoustical ceiling coverage, creating outstanding acoustic comfort and temperature control at levels that cannot be achieved with island or baffle systems.

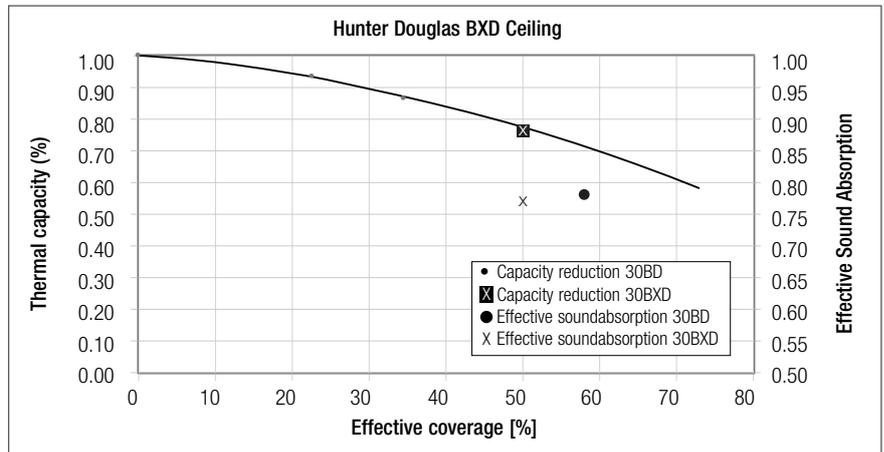

- 1 = 30BD / 30BXD panel
- 2 = Al carrier module 60
- 3 = Hanger
- 4 = Al carrier splice

Panel type	Carrier span (mm)		Panel span (mm)			
	A	B	on 2 carriers		on 3 or more carriers	
			C	D	C	D
30BD/30BXD	300	1200	1800	150	1800	150

THERMAL ACTIVATION

CCA reaches maximum efficiency if there is no barrier between the concrete structure and the underlying spaces. Independent climate chamber tests have shown that the aluminium used in Luxalon® CCA Acoustic+ 30BD and 30BXD panels and carriers is highly suited for cooling and heating as it functions as a thermal conductor. In combination with the relative openness of this ceiling system (50% openness with complete ceiling coverage), very positive results can be obtained.

THERMAL CAPACITY

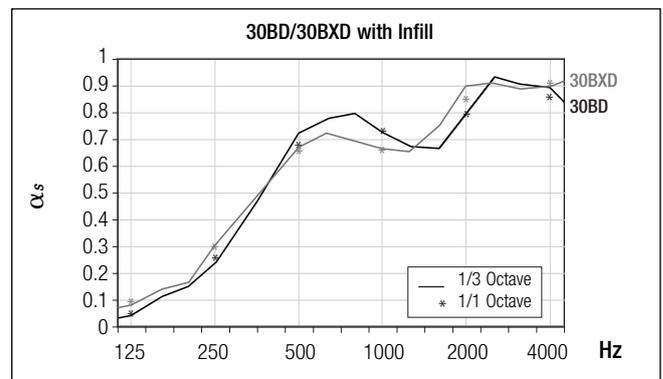

Complete ceiling coverage results in a thermal capacity reduction of only 23% when compared to a bare CCA ceiling. During winter the reduction in the thermal capacity compared to a bare CCA ceiling is 6%, based on complete ceiling coverage.

THERMAL EXCHANGE (Summer situation)

Reduction in capacity of CCA with 30BXD	Unit
2.0	W/m ² .K
23	%

ACOUSTICS

Our extensive experience in acoustic applications with Luxalon® Ceiling Systems has enabled Hunter Douglas to design an optimised CCA solution. Luxalon® CCA Acoustic+ 30BD and 30BXD panels are finished with special fine perforation in combination with acoustic nonwoven fabric and a high-grade sound absorbing filling. The result is an absorption capacity of $\alpha_w = 0.6(H)$ for an acoustically comfortable working environment.

ACOUSTICS

Acoustic+	125	250	500	1000	2000	4000	α_w	NRC
30BD	0.06	0.26	0.69	0.74	0.80	0.87	0.55	0.65
30BXD	0.09	0.30	0.66	0.67	0.85	0.91	0.60	0.65

The values are based on a plenum height of 70 mm. For the graphic reproduction of acoustic values see curve 30BD and 30BXD in the above graph. Tested by Peutz, test report no.: A 1846-1E-RA and test report no.: BA 1164-2E-RA

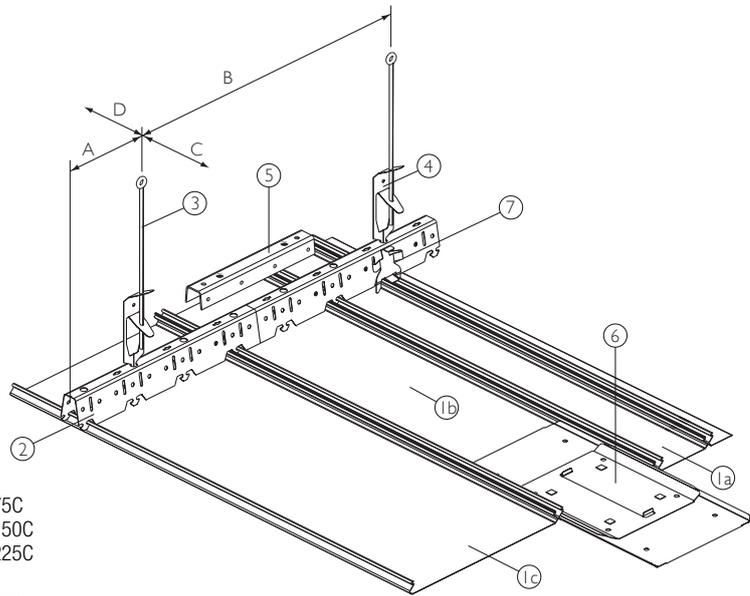

75C-150C-225C

PANELS

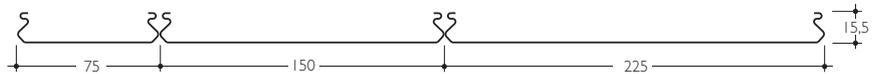

This ceiling system combines three widths of panels which are distinguished from other Hunter Douglas systems by their bevelled edges and when installed produces a closed smooth appearance.

SUSPENSION

The panels can be fixed to a universal carrier for all three widths, all the same or mixed. The panels are joined together using a panel splice whilst the carriers use the standard carrier connector. Adaptor panels shall be locked by the adaptor clip.

84B

PANELS

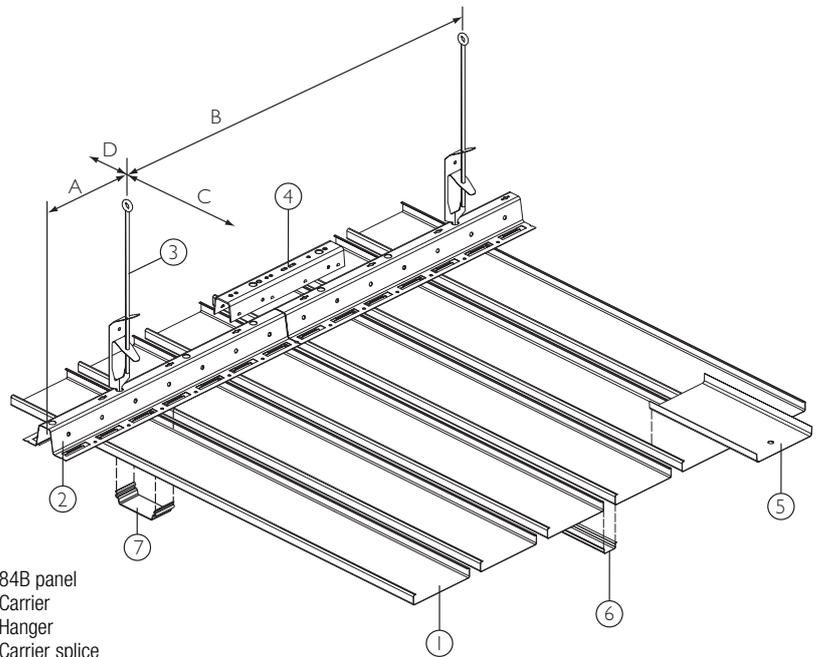

The 84B ceiling system consists of box shaped panels (1) which can be easily clipped on a carrier (2). Panels can be joined by using the panel splice (5). The 16 mm joint can be filled with a flush join profile (6) to form a closed ceiling appearance.

SUSPENSION

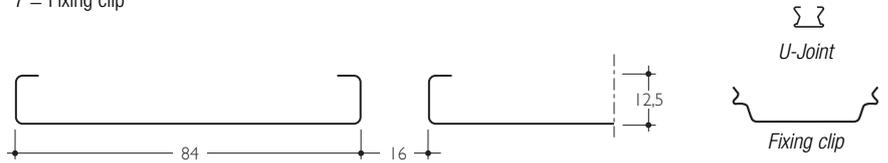

The panel carrier (2) is provided with prongs to accommodate the panels in a standard module of 100 mm. Carriers are connected by using the carrier splice (4).

The system is designed to withstand the impact of all types of ball sports (DIN 18038). It is necessary to use the fixing clips and adapt the carrier span.

Flexible carriers are available in order to create a curved ceiling. To achieve a different module (90-125 mm) a non-standard carrier is available.

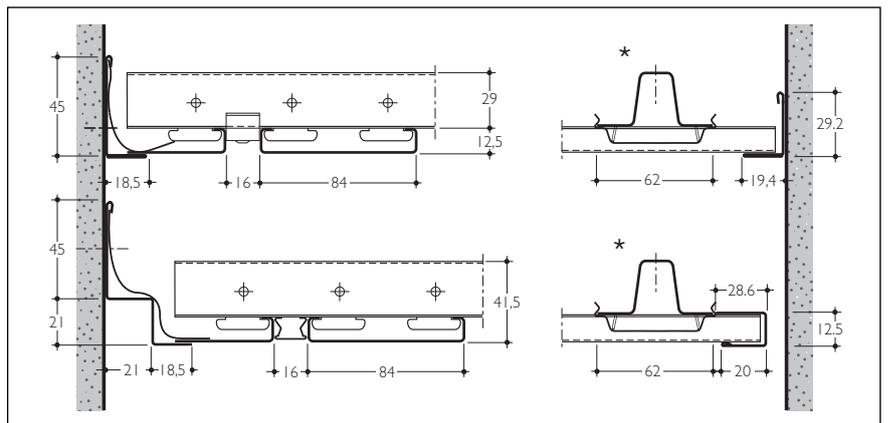

- 1 = 84B panel

84R

- Curve 1

84R panels with Ø2 mm holes, module 100 mm, closed joints. The reverse side of the panels is provided with black non-woven tissue glued over the whole perforated area. Plenum depth is 200 mm.

Tested by Peutz; test report no: A1709

84C

- Curve 1

84C panels, perforated with Ø2 mm holes, closed joints, module 100 mm. The reverse side of the panels is provided with black non-woven tissue glued over the whole perforated area. Plenum depth is 200 mm.

- Curve 2

84C panels, perforated with Ø2 mm holes, closed joints, module 100 mm. Plus additional 25 mm thick mineral wool pads with a density of approx. 12 kg/m³. Plenum depth is 200 mm.

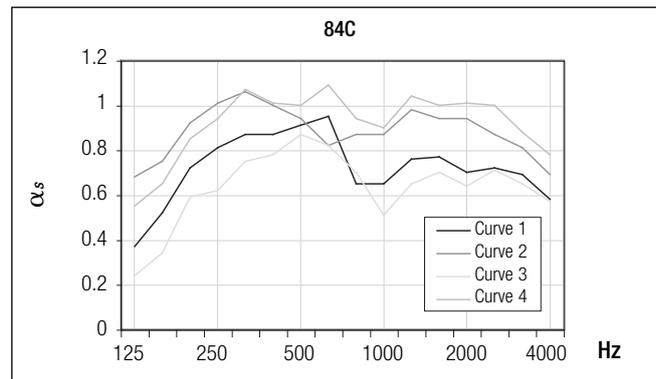

- Curve 3

84C panels, perforated with Ø1 mm holes, closed joints, module 100 mm. The reverse side of the panels is provided with black non-woven tissue glued over the whole perforated area. Plenum depth is 200 mm.

- Curve 4

84C panels, perforated with Ø1 mm holes, closed joints, module 100 mm. Plus additional 25 mm thick mineral wool pads with a density of approx. 12 kg/m³. Plenum depth is 200 mm.

Tested by TNO Delft; test report no: TPD-HAG-RPT-920039/920038

Material specifications

Promoting sustainable forest management
www.pefc.org

We are dedicated manufacturing a sustainable product. Our paint and aluminium melting processes are considered to be one of the industry standards in terms of clean production processes. All aluminium products are 100% recyclable at the end of their lifecycle.

Our proprietary coil-coating process ensures ceiling panels get a superb finish. Independent tests have proven the excellent performance characteristics of Luxacote®.

The Dutch Green Building Council (DGBC) was founded in 2008 in the Netherlands as a market initiative. The aim was to make Sustainability in the building industry measurable by developing a sustainability label allowing for the uniform rating of buildings throughout the Netherlands.

Material specifications

FIRE BEHAVIOUR

Luxalon® metal suspended ceilings are classified incombustible and will therefore not contribute to possible fires. When ceilings however need to protect the structural integrity of the building, Luxalon® Ceilings offer a range of practical and tested solutions with regards to fire stability. Further information is available on request.

COLOUR RANGE

The standard Hunter Douglas interior and exterior colour range for Luxalon® Linear Ceiling Systems includes several different colours and finishes. See colour chart. Any other (RAL or NCS) colour is available on request.

CURVED CEILING POSSIBILITIES

Flexible carriers: Multipanel, 84B, 84R, 70U / Curved panels: 84R

SPORTHALL CEILING

The 70U and 84B system with metal panels and carriers makes the system perfectly suitable for applications in sporthalls.

EXTERIOR USE

All linear ceilings ensure durability in exterior building applications. Our proprietary coil-coating process ensures ceiling panels get a superb finish. Independent tests have proven the excellent performance characteristics of Luxacote®. The topcoat contains a solid UV filter that guarantees perfect colourfastness and gloss stability. The topcoat also offers better resistance against scratches with a structure that resists and masks any minor damage that may occur during installation, resulting in a high abrasion resistance. The alloy and pre-treatment also offers optimal resistance to corrosion.

HUNTER DOUGLAS ARCHITECTURAL PROJECTS

In the last 50 years, we've been fortunate enough to help turn countless innovative sketches into innovative buildings. With major operation centres in Europe, North America, Latin America, Asia and Australia, we've contributed to thousands of high-profile projects, from retail and commercial facilities to major transit centres and government buildings.

ARCHITECTURAL SERVICES

We support our business partners with a wide range of technical consulting and support services for architects, developers and installers. We assist architects and developers with recommendations regarding materials, shapes and dimensions, colours and finishes. We also help creating design proposals, visualisations and mounting drawings. Our services to installers range from providing detailed installation drawings and instructions to training installers and advising on the building site.

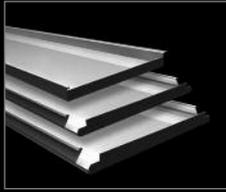

Not only are the world's architects and designers our partners, they're our inspiration. They continue to raise the bar for excellence. We create products that help bring their visions to life: Window Coverings, Ceilings, Sun Control Systems and Façades.
