HeartFelt®

The Ceiling that *had* to be made

Design as a source of inspiration

Felt making has been a popular method of creating textiles for thousands of years. Felt's unique, tough structure and soft appearance means that designers continue to view felt as an intriguing material for clothing, furniture, fashion accessories and household items. Inspired by both felt and designers, Hunter Douglas Architectural created the ceiling that had to be made: HeartFelt®. A modular felt ceiling system with incredible acoustics and a unique appearance. A design that delights both eyes and ears and has sustainability at its core.

For improved learning, working and healthcare

HeartFelt® is an innovative, patented product that turns every ceiling into a visual and acoustic playground. The felt panels are available in five beautiful grey shades and can be easily clipped into the carriers, at varying centres. This makes it possible to perfectly adapt the visual and functional properties of the ceiling to meet the needs of the Architect, Interior Designer or end user. HeartFelt® conforms to all the required building certifications and the European Indoor Environmental Standard (EN 15251). This makes the HeartFelt® ceiling system particularly suited to offices and other functional properties, schools and buildings used for healthcare services.

HeartFelt® in a nutshell

- Modular ceiling system with felt panels
- Excellent acoustic properties
- Visually integrates the ceiling into the interior design
- 100% recyclable, sustainable material
- Patented product
- Patented manufacturing technology
- Cost effective
- Easy to maintain: dirt and dust resistant
- Certified:
 - European Indoor Environmental Standard EN 15251
 - C2C
 - Suitable for BREEAM and Leed
 - VOC emissions class A+, M1
 - Fire classification EN 13501-1 class B, s1, d0

ACOUSTIC PROPERTIES

The ceiling as an acoustic mixing board

With the HeartFelt® ceiling system, Hunter Douglas is providing architects, installers and building owners with an advanced system that allows them to precisely manage the acoustics of every space. Felt's sound-absorbing properties in combination with the design of the panels, the space between the panels and the height at which the ceiling system is hung, determine how sound moves throughout the space. HeartFelt® can help to create a pleasant workspace or learning environment and contribute to increased productivity.

The ceiling as a creative canvas

HeartFelt®'s linear felt ceiling panels are box-shaped and clip easily to the specially designed carriers. Since the panels are available in five shades of grey, ranging from off-white to anthracite, interesting patterns can be created. By varying the

placement of the panels and the ceiling system, the ceiling is able to play a crucial role in the overall interior design.

HeartFelt® in detail

PES fibres

HeartFelt® is a linear ceiling system with open joints made of non-woven thermoformed PES fibres. The panels are manufactured up to a maximum size of 40 mm in width and 55 mm in height. The following modules are available:

MODULE	JOINT WIDTH	OPENNESS %
100 mm	60 mm	60 %
90 mm	50 mm	55 %
80 mm	40 mm	50 %
70 mm	30 mm	43 %
60 mm	20 mm	33 %
50 mm	10 mm	20 %

The 100 mm module is suitable for use in buildings with concrete core activation (CCA).

Five shades of grey

HeartFelt® is available in five grey shades, ranging from off-white to anthracite. The proportion of black and white PES fibres in the raw material determines the colour of the panels.

OFF-WHITE 7595

LIGHT GREY 7596

MIDDLE GREY 7597

DARK GREY 7598

ANTHRACITE 7599

Ease of installation

The HeartFelt® ceiling system's felt panels are light and clip easily to the carriers. We can manufacture panels of any desired dimensions between 1 metre and 6 metres. If required, the panels can be trimmed with a sharp knife during installation.

Joining and finishing

The panels can be joined using a splice. The ends can be finished with an integrated end cap. This means that the HeartFelt® ceiling system can be installed both as a full ceiling and as a functional ceiling island.

Integrated technology

The HeartFelt® ceiling system's modular nature makes it possible to integrate technology such as lighting and ventilation. There is a reinforcement piece that can be inserted into the panels in order to attach objects such as signs.

Suspension

The carriers that the felt panels clip onto are made of coated aluminium and have a height of 52 mm. The total height of the system is 92 mm. The centre-to-centre distance between each carrier is 1200 mm, while the centre-to-centre distance between each hanger is 1500 mm.

SUSTAINABLE FEATURES

Ceilings as a sustainability standard

The linear felt ceiling panels that comprise HeartFelt® are made of non-woven, thermoformed PES fibres. No finishing coat is applied to the panels, making the panels 100% recyclable. The carriers (aluminium) and hangers (galvanised steel) are 100% recyclable.

C2C certification

- C2C Bronze certificate
- The product meets the 'Low' requirements for use in low-polluting buildings.

Building certification

- VOC emissions class A+
- Suitable for BREEAM and Leed

VOC emissions

- BREEAM-Nor: approved
- M1: approved
- French regulations for CMR substances: approved

Easy to maintain

HeartFelt®'s linear felt ceiling panels are easy to clean with a duster or vacuum cleaner.

Designed to work for you

Hunter Douglas is a global player within the field of modern architecture. We understand the conflict between form and function better than anyone, and enrich the market with inspiring solutions that strengthen the aesthetic appeal of buildings and their functionality in terms of indoor climate, energy use and acoustics.

We develop clever and aesthetically appealing solutions in collaboration with architects and designers to control heat, light, sound and energy. We are also inspired by real-world challenges and ideas as well as developments in technology and materials. All our products are thought out in great detail to make a difference to both architects and end users.

Architectural services

We support our business partners with a wide range of technical consulting and support services for architects and installers. We assist architects and developers with recommendations for materials, shapes and dimensions and colours and finishes. We also help create design proposals, visualisations and mounted drawings. Our services to installers range from providing detailed installation drawings and instructions to training installers and advice during installation.
